FERTILITY

Fertilizer Rate 150-200 ppm N
EC Range High
pH Range 5.8-6.2

TEMPERATURE

Day Temperature 55-65°F (13-18°C)
Night Temperature 45-55°F (7-13°C)

IRRIGATION

Irrigation Frequency Moderate

LIGHT

Photoperiodic requirements Long day
Supplemental? No
Benefits From Shade? No

PINCHING

Finishing Pinch? No

TIPS

- 8 weeks of cool night temperatures at 50°F (10°C) ADT is necessary for proper bud set.
- Alstroemeria is a heavy feeder and requires a constant fertigation regimen.
- Deadhead spent flowers at base of flower stem to promote re-blooming.

### DESCRIPTION

‘Inticancha’ is the best compact Alstroemeria on the market boasting vibrant colors, attractive foliage and a compact habit. All of these attributes make ‘Inticancha’ a perfect choice for containers. ‘Indian Summer’, ‘Summer Breeze’, ‘Summertime’, and ‘Sunshine’ are more robust than the rest of the series and will reach 36-48 inches tall.

### CONSUMER APPEAL

- The beautiful architecture and floral patterns of Alstroemeria are irresistible as a cut flower and as a landscape perennial.

### GARDEN ATTRIBUTES

- A tuberous perennial that’s perfect as a centerpiece in high traffic areas.
- Works well in containers where it acts as the upright height structure to balance the architecture of a mixed combination.
- Prefers moderately moist soils rich in organic matter and compost. Well drained soil in full sun locations will lead to the most beautiful plants with the best flowers. Afternoon shade or dappled sunlight throughout the day helps reduce stress in the heat of the summer.

### NATIVITY

Of hybrid origin: Parental lineage from South America with two distinct centers of original located in Central Chile and Eastern Brazil.

### COMPANION PLANTS

*Houttuynia, Euphorbia, Knautia, Nepeta*

### COMMON NAME(S)

Peruvian lily, lily of the Incas

### ‘Inticancha Red’

### ‘Inticancha Summer Breeze’
